341 documented operations

https://docs.cyberarmor.ai/api/

Read-only reference

This page never asks for or stores an API key, sends API calls, or loads a third-party API console. Run the examples from your own development environment. Use a dedicated test tenant and test data: development is not a promise of an isolated sandbox.

Choose the correct region

Use the region where your tenant was provisioned. US: https://app.cyberarmor.ai. Singapore: https://am-app.cyberarmor.ai. Development: https://dev-app.cyberarmor.ai. Keys and tenants are not automatically shared between regions. Custom partner domains must be configured by your deployment operator.

Authenticate from your backend

Obtain an authorized, tenant-scoped integration key from your CyberArmor.AI administrator. Send it over HTTPS in the x-api-key header. Never put it in a URL, public JavaScript bundle, analytics, support screenshot or source repository. Keep a partner front end behind your own backend, which stores the key and checks the signed-in user's tenant and permissions. A tenant_id in a path or body must agree with the credential's tenant; it never grants access by itself.

Portal sessions are a different contract

The /api/customer/ endpoints use the customer's authenticated portal session, not an API key. State-changing requests also echo the ca_customer_csrf cookie as x-csrf-token. The ca_customer_session cookie is HttpOnly and should be handled by the browser. Never forge x-customer-* identity headers: the gateway sets them after authentication. Ask for a supported integration endpoint when a partner backend needs functionality currently available only through portal sessions.

Understand the result

Check the HTTP status before reading the body. Typical statuses are 400 for an invalid request, 401 for missing or invalid credentials, 403 for denied role, tenant or lifecycle access, 409 for a conflict, 422 for declared-schema validation, 429 for rate limiting, and 502/503/504 for an unavailable upstream. Not every route emits every status. A successful HTTP status alone is not a security verdict: read the route's decision fields. For approval gates, proceed only on an explicit cleared: true; timeout, malformed data and any other result do not authorize a change.

Keep your integration current

The build imports the FastAPI apps without starting services and exports only paths exposed by ingress. Each docs image rebuild regenerates the reference and both PDFs from the same schema. The fingerprint identifies the contract used for this publication. A PDF is a snapshot; compare its fingerprint with the current website. Schemas document declared model constraints; handlers with generic JSON remain visibly marked. This catalog covers the public control-plane, customer portal, policy gates and EDL. Internal service APIs and the separate mutual-TLS payment ingress are outside this catalog.

Localize a partner application

Download the OpenAPI JSON to generate clients or inspect types with compatible OpenAPI 3.1 tools. Keep HTTP paths, JSON field names, enum values and operation identifiers unchanged; translate only your own display text. Enforce tenant authorization on your backend for every request. English and Simplified Chinese share one machine contract. Additional documentation languages can be added later.

First request: read the public transport key

```
curl --fail-with-body --silent --show-error \
  https://am-app.cyberarmor.ai/pki/public-key
```

This discovery request needs no API credential. It is not proof that authenticated API access is working. For an authenticated call, use the exact method, path, parameters and credential type shown for that endpoint.

Try an authenticated URL check from your own machine

Install httpx in your own development environment. This Python example prompts for a tenant ID and API key; the key is not echoed, placed in a URL or saved. Use synthetic data and your tenant's region. It submits a real request that may be logged and billed under your tenant. Redirects are disabled so credentials are not forwarded to a different host. Read the returned decision before deciding whether to fetch the URL.

```
from getpass import getpass
import httpx

tenant_id = input("Tenant ID: ").strip()
api_key = getpass("API key: ")
with httpx.Client(follow_redirects=False, timeout=75) as client:
    response = client.post(
        "https://am-app.cyberarmor.ai/proxy-svc/trust-gate/evaluate",
        headers={"x-api-key": api_key},
        json={"tenant_id": tenant_id, "url": "https://example.com/",
              "source": "partner-backend", "depth": "fast"},
    )
    print(response.status_code)
    response.raise_for_status()
    print(response.json())
```

Endpoints

GET /agents/archived

Tenant API key (x-api-key); bearer token only where declared

Operation: control-plane__agents_archived_agents_archived_get

Schema limitation: the service declares generic JSON for this request or response. The schema does not enumerate every accepted or returned field. Confirm the payload contract with your integration contact before implementing it.

Parameters

```
[{"in": "query", "name": "tenant_id", "required": true, "schema": {"title": "Tenant Id", "type": "string"}}, {"in":
"header", "name": "x-api-key", "required": false, "schema": {"anyOf": [{"type": "string"}, {"type": "null"}],
"title": "X-Api-Key"}}]
```

Responses

```
{"200": {"content": {"application/json": {"schema": {}}}, "description": "HTTP 200"}, "422": {"content":
{"application/json": {"schema": {"$ref": "#/components/schemas/control-plane__HTTPValidationError"}}},
"description": "HTTP 422"}}
```

GET /agents/fleet-summary

Tenant API key (x-api-key); bearer token only where declared

Operation: control-plane__agents_fleet_summary_agents_fleet_summary_get

Schema limitation: the service declares generic JSON for this request or response. The schema does not enumerate every accepted or returned field. Confirm the payload contract with your integration contact before implementing it.

Parameters

```
[{"in": "query", "name": "tenant_id", "required": false, "schema": {"anyOf": [{"type": "string"}, {"type":
"null"}], "title": "Tenant Id"}}, {"in": "header", "name": "x-api-key", "required": false, "schema": {"anyOf":
[{"type": "string"}, {"type": "null"}], "title": "X-Api-Key"}}]
```

Responses

```
{"200": {"content": {"application/json": {"schema": {}}}, "description": "HTTP 200"}, "422": {"content":
{"application/json": {"schema": {"$ref": "#/components/schemas/control-plane__HTTPValidationError"}}},
"description": "HTTP 422"}}
```

POST /agents/register

Tenant API key (x-api-key); bearer token only where declared

Operation: control-plane__agent_register_agents_register_post

Schema limitation: the service declares generic JSON for this request or response. The schema does not enumerate every accepted or returned field. Confirm the payload contract with your integration contact before implementing it.

Parameters

```
[{"in": "header", "name": "x-api-key", "required": false, "schema": {"anyOf": [{"type": "string"}, {"type":
"null"}], "title": "X-Api-Key"}}]
```

Request body

```
{"content": {"application/json": {"schema": {"additionalProperties": true, "title": "Payload", "type": "object"}}},
"required": true}
```

Responses

```
{"200": {"content": {"application/json": {"schema": {"additionalProperties": false, "properties": {"agent_id":
{"title": "Agent Id", "type": "string"}, "status": {"const": "registered", "title": "Status", "type": "string"}},
"required": ["status", "agent_id"], "title": "AgentRegistered", "type": "object"}}}, "description": "HTTP 200"},
"422": {"content": {"application/json": {"schema": {"$ref":
```

"#/components/schemas/control-plane__HTTPValidationError"}}}, "description": "HTTP 422"}}

POST /agents/{agent_id}/abom/ingest

Tenant API key (x-api-key); bearer token only where declared

Operation: control-plane__agent_abom_ingest_agents__agent_id__abom_ingest_post

Schema limitation: the service declares generic JSON for this request or response. The schema does not enumerate every accepted or returned field. Confirm the payload contract with your integration contact before implementing it.

Parameters

[{"in": "path", "name": "agent_id", "required": true, "schema": {"title": "Agent Id", "type": "string"}}, {"in": "header", "name": "x-api-key", "required": false, "schema": {"anyOf": [{"type": "string"}, {"type": "null"}], "title": "X-Api-Key"}}]

Request body

{"content": {"application/json": {"schema": {"$ref": "#/components/schemas/control-plane__ABOMIngestRequest"}}}, "required": true}

Responses

```

GET /telemetry/{tenant_id}

Tenant API key (x-api-key); bearer token only where declared

Operation: control-plane__list_telemetry_events_telemetry__tenant_id__get

Schema limitation: the service declares generic JSON for this request or response. The schema does not enumerate every accepted or returned field. Confirm the payload contract with your integration contact before implementing it.

Parameters

```
[{"in": "path", "name": "tenant_id", "required": true, "schema": {"title": "Tenant Id", "type": "string"}}, {"in":
"query", "name": "limit", "required": false, "schema": {"default": 200, "title": "Limit", "type": "integer"}},
{"in": "query", "name": "source", "required": false, "schema": {"anyOf": [{"type": "string"}, {"type": "null"}],
"title": "Source"}}, {"in": "query", "name": "event_type", "required": false, "schema": {"anyOf": [{"type":
"string"}, {"type": "null"}], "title": "Event Type"}}, {"in": "header", "name": "x-api-key", "required": false,
"schema": {"anyOf": [{"type": "string"}, {"type": "null"}], "title": "X-Api-Key"}}]
```

Responses

```
{"200": {"content": {"application/json": {"schema": {}}}, "description": "HTTP 200"}, "422": {"content":
{"application/json": {"schema": {"$ref": "#/components/schemas/control-plane__HTTPValidationError"}}},
"description": "HTTP 422"}}
```

GET /tenant-posture/{tenant_id}

Tenant API key (x-api-key); bearer token only where declared

Operation: control-plane__agent_tenant_posture_tenant_posture__tenant_id__get

Schema limitation: the service declares generic JSON for this request or response. The schema does not enumerate every accepted or returned field. Confirm the payload contract with your integration contact before implementing it.

Parameters

```
[{"in": "path", "name": "tenant_id", "required": true, "schema": {"title": "Tenant Id", "type": "string"}}, {"in":
"header", "name": "x-api-key", "required": false, "schema": {"anyOf": [{"type": "string"}, {"type": "null"}],
"title": "X-Api-Key"}}]
```

Responses

```
{"200": {"content": {"application/json": {"schema": {"title": "Response Agent Tenant Posture Tenant Posture Tenant
Id Get"}}}, "description": "HTTP 200"}, "422": {"content": {"application/json": {"schema": {"$ref":
"#/components/schemas/control-plane__HTTPValidationError"}}}, "description": "HTTP 422"}}
```
